#### DETAILED ACTION

### Claim Rejections - 35 USC § 112

1. Claims 7, 9-11, 23 and 24 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

"Long-term maximum" in claim 7 is unclear and "the long-term maximum exertion level" in claim 9 (line 3), claim 10 (line 3), claim 11 (line 5) lacks antecedent basis. These rejections appear correctable by changing claim 3 at line 3 from "long-term maximal" to --long-term-maximum--.

In claim 11, line 7, "the slope" lacks antecedent basis.

In claim 23 (line 3) and claim 24 (line 3), "the long-term maximum exertion level" lacks antecedent basis.

Appropriate correction is required.

## Claim Rejections - 35 USC § 102

2. Claims 1-25 stand rejected under 35 U.S.C. 102(e) as being anticipated by Kay et al. (US 6411850).

Kay et al. disclose a method for automatically determining an anaerobic breakpoint for an adaptive rate pacemaker and for automatically adjusting the pacing rate based on the slope of the rate responsive curve. The cardiac pacemaker pacing signal is modified by the sensed ventilation and the pacing rate is modified in response to ventilatory breakpoint. The control circuit matches the peak ventilation, read as the MAR, with the maximum pacing rate

Application/Control Number: 09/657,404

Art Unit: 3762

(col. 3 @ 13-30). Once the breakpoint is reached, the pulse is attenuated based on the rate response slope (col. 5 @ 10-44; col. 7 @ 20-37; figure 1). The dual slope curve of the respiratory rate (figure 1) and the breakpoint, read as the MSR, can be determined from data collected over a period of time to define the respiratory reserve by measuring ventilation during exercise (col. 2 @ 48-65; col. 7 @ 20-24). The breakpoint and curve can also be determined using a pacemaker programmed to determine the ventilatory threshold and peak ventilation which then matches the peak ventilation to the maximal pacing rate (col. 7 @ 1-10). Short-term average relative minute ventilation, 30 second, and long-term average relative minute ventilation, 2 hour, are used to regulate the sensor rate in correspondence to metabolic demand using a Response Factor (col. 8 @ 22-42). The Response Factor slope, which maps the patient's respiratory reserve, is dynamically adjusted based on the maximum daily sensor rate excursions and a weekly average of these readings (col. 8 @ 43-61). Historically, a fixed percentage of the respiratory reserve is noted as a means used to adjust the pacing rate (col. 8 @ 54-57).

The Applicant's arguments filed 2/10/03 have been fully considered, but they are not convincing.

The Applicant states he is unable to find a method for operating a rate adaptive pacemaker in which a rate responsive curve is defined such that an exertion level corresponding to the patient's maximum exercise capacity would be mapped to a physiologically favorable maximum rate, MAR, the sensor indicated rate is limited to a specific maximum sensor indicated rate MSR that is independent from the MAR, and the MSR is increased after a specified time period during which the long-term maximum exertion level is updated. The Examiner finds Kay

Application/Control Number: 09/657,404

Art Unit: 3762

et al. do teach these elements of the claimed invention as follows: Kay et al. teach method for operating a rate adaptive pacemaker (col. 1 @ 7-10) in which a rate responsive curve is defined (figure 1; col. 5 @ 11-44) such that an exertion level corresponding to the patient's maximum exercise capacity (figure 1; Peak Exercise - MVpeak) would be mapped to a physiologically favorable maximum rate, MAR (figure 1; Paced Rate at Anaerobic Threshold - PRat), the sensor indicated rate is limited to a specific maximum sensor indicated rate MSR (figure 1; Maximum Sensor Rate) that is independent from the MAR, and the MSR is increased after a specified time period during which the long-term maximum exertion level is updated (col. 8 @ 43-53).

The Applicant apparently traverses reading the peak ventilation as the MAR and cites the instant specification (page 16, lines 3-6) for clarification of the MAR. The instant specification states the MAR is a maximal rate that is deemed physiologically favorable. The ventilation rate is read to favorably reflect the exertion level, hence Kay et al. are deemed to read on the claimed invention.

### Statutory Basis

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

#### Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE

MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

MONTHS of the mailing date of this final action and the advisory action is not mailed until after

Art Unit: 3762

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Fran Oropeza whose telephone number is (703) 605-4355. The Examiner can normally be reached on Monday – Thursday from 6 a.m. to 4:30 p.m.

If attempts to reach the Examiner by telephone are unsuccessful, the Examiner's Supervisor, Angela D. Sykes can be reached on (703) 308-5181. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 306-4520 for regular communication and (703) 306-4520 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0858.
